DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 19 is rejected under 35 U.S.C. 102(b) as being anticipated by Coulon et al. (US 5,362,468).

Coulon et al. teaches a process for the decomposition of halogenated hydrocarbon fluids by contacting the fluids with solid elements, the solid elements being inductively heated to provide a temperature between 600 and 2800 °C. The material of the solid elements may be silicon carbide.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-4, 12-13, 15, and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Coulon et al. (US 5,362,468) taken with Fookes (US 5,951,852).

Coulon is applied above. Coulon does not teach that a catalyst material be coated on the solid elements. Fookes teaches that catalysts containing nickel, platinum, iridium, molybdenum,

iron, cobalt, and combinations of the above are used for the decomposition of halogenated hydrocarbons (column 9). It would have been obvious to one of ordinary skill at the time of invention to apply a catalyst material to the solid elements of Coulon et al. in order to provide a more effective decomposition. .

Allowable Subject Matter

Claims 5-7, 14, and 16-17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Peter J Lish whose telephone number is 703-308-1772. The examiner can normally be reached on 9:00-6:00 Monday through Friday.
